

ABSTRACT

An automatic pet food dispensing device having a container that stores pet food, a circular pipe attached below the container, a dispenser rotatably received in
5 the circular pipe, a motor that rotates the dispenser, and one or more dispensing spouts connected to the circular pipe is provided. The dispenser includes a shaft with a rectangular cross section and two or more circular dispensing discs fixed to the shaft, and each of the
10 dispensing discs has an arc recess positioned opposite of each other. The dispensing discs have evenly spaced grooves cut out around the circumference of each disc and evenly spaced convex bumps slightly protruding upward.
